

Patient Name: John Doe

Date of visit: November 18, 2001

Medical Record Number: 123456987

Examination and Diagnosis:

- Patient diagnosed with paroxysmal nocturnal hemoglobinuria (PNH), a rare stem cell disorder.
- Presented symptoms include hemoglobinuria, fatigue, and intermittent abdominal pain.

Treatment:

- Initiated eculizumab therapy, a monoclonal antibody that inhibits complement protein C5.
- Supportive care measures like blood transfusions and pain management have been started.

Progress Notes:

- Patient's condition remains stable post eculizumab therapy initiation.
- Regular monitoring of hemoglobin levels and renal function is ongoing.
- Patient is responding well to treatment, further evaluations are scheduled.

Plan:

- Continue eculizumab therapy and closely monitor hematological parameters.
- Provide supportive care and ensure patient comfort.
- Consult with hematology team for further management options if needed.

Attending Physician: Dr. Jane Smith, MBBS
