

Patient Name: Jackson White
Date of Visit: January 1, 2020
Medical Record Number: 5678944

Subjective

- 50-year-old male, complains of gradually worsening blurry vision in both eyes. He notes a central dark spot in his visual field, especially when reading or watching TV.

Observation

- Comprehensive eye examination reveals drusen and pigmentary changes in the macula. Optical coherence tomography confirms the presence of age-related macular degeneration.

Assessment

- Neovascular age-related macular degeneration.

Plan

- Intravitreal injections of antivascular endothelial growth factor, anti-VEGF. Agents will be administered to manage neovascularization. Lifestyle modifications will also be discussed.

Attending Physician: Dr. Isabella Turner
