

Patient Name: Caleb Adams  
Date of Visit: August 30, 2005  
Medical Record Number: 6789986

Subjective

- 38-year-old male presents with complaints of persistent heartburn, regurgitation, and difficulty swallowing. Symptoms worsen after meals and when lying down.

Observation

- Gastroscopy reveals a hiatal hernia and esophageal erosions. Esophageal manometry confirms impaired lower esophageal sphincter function.

Assessment

- Gastroesophageal reflux disease, GERD, with associated hiatal hernia.

Plan

- Proton pump inhibitors will be prescribed to alleviate symptoms. Lifestyle modifications including dietary changes and elevation of the head of the bed will be recommended.

Attending Physician: Dr. Ethan Miller
